

Mapping Denmark's Socio-economic Landscape

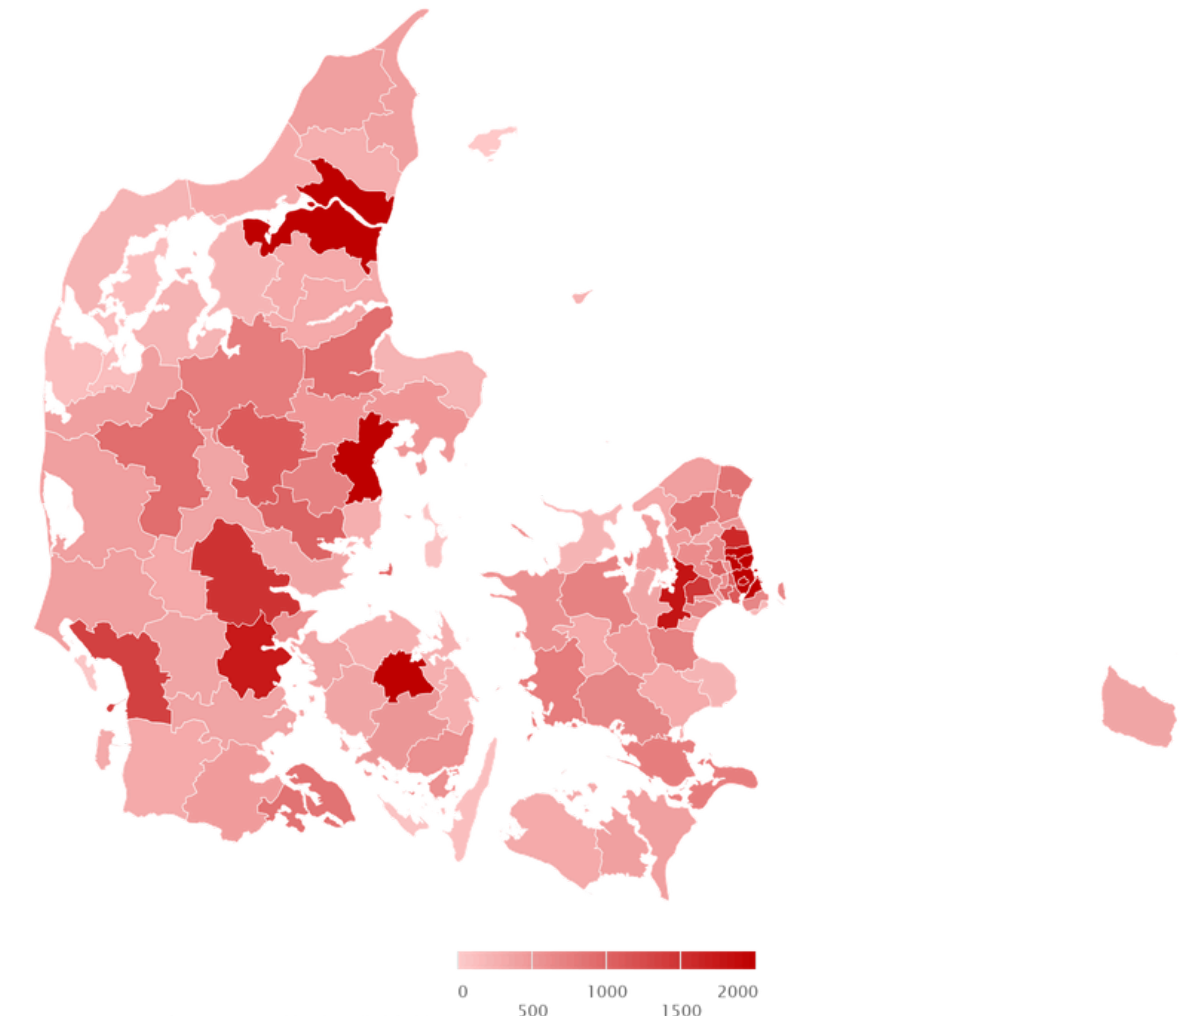

Description of the idea

What is the objective?

We aim to explore how *enrollment* and *employment* ratios affect *average income* across Denmark's 98 municipalities, and whether high-income regions correlate with major industries or higher education levels.

How will we get the data?

All the data regarding average income, employment and enrollment ratio, and major companies location, are from the Statistics Denmark website.

Denmark

Municipalities with a higher number of Bachelor students have a darker color.

Mockup visualization

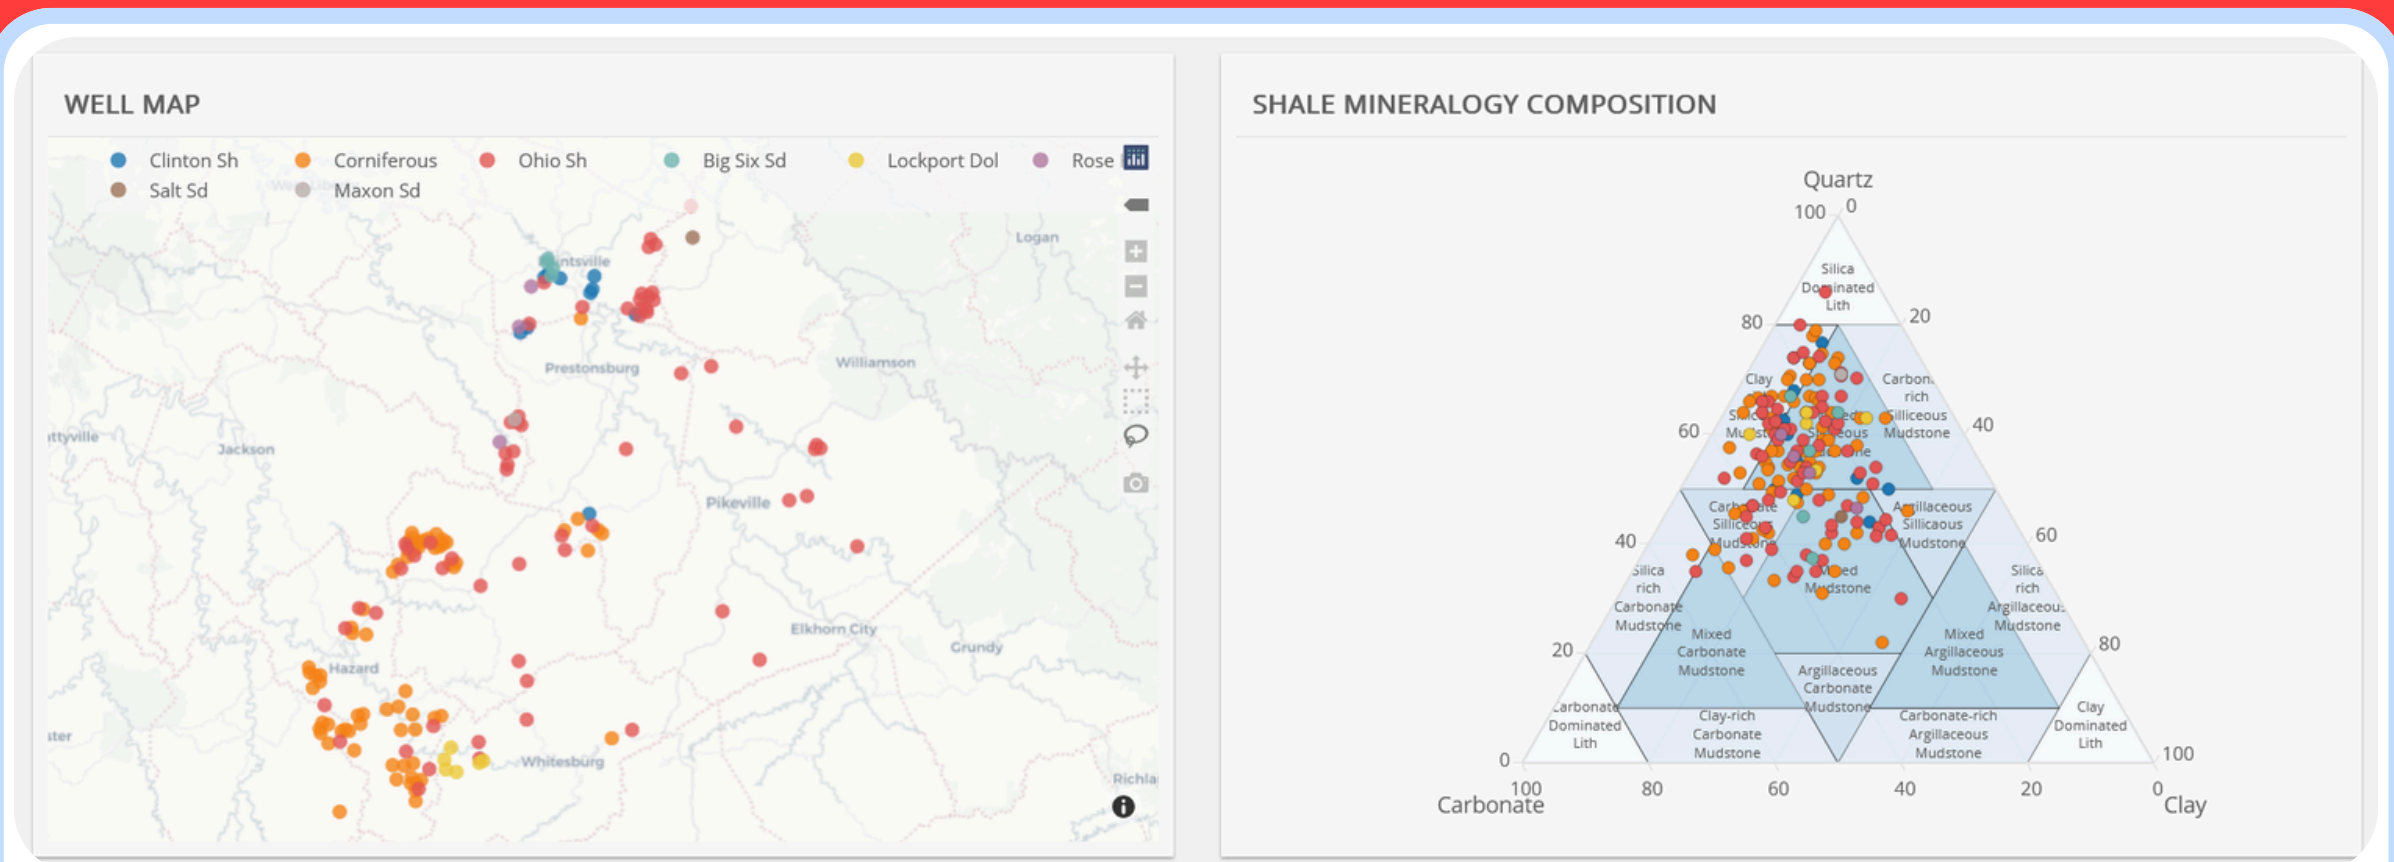

How will the Data Story look?

We want the visualization to be interactive for the user, and the plots to be dynamically linked between each other.

Highlighting municipalities on the map will show the data points and curves on the other plots, and viceversa.

Visualization inspired from:

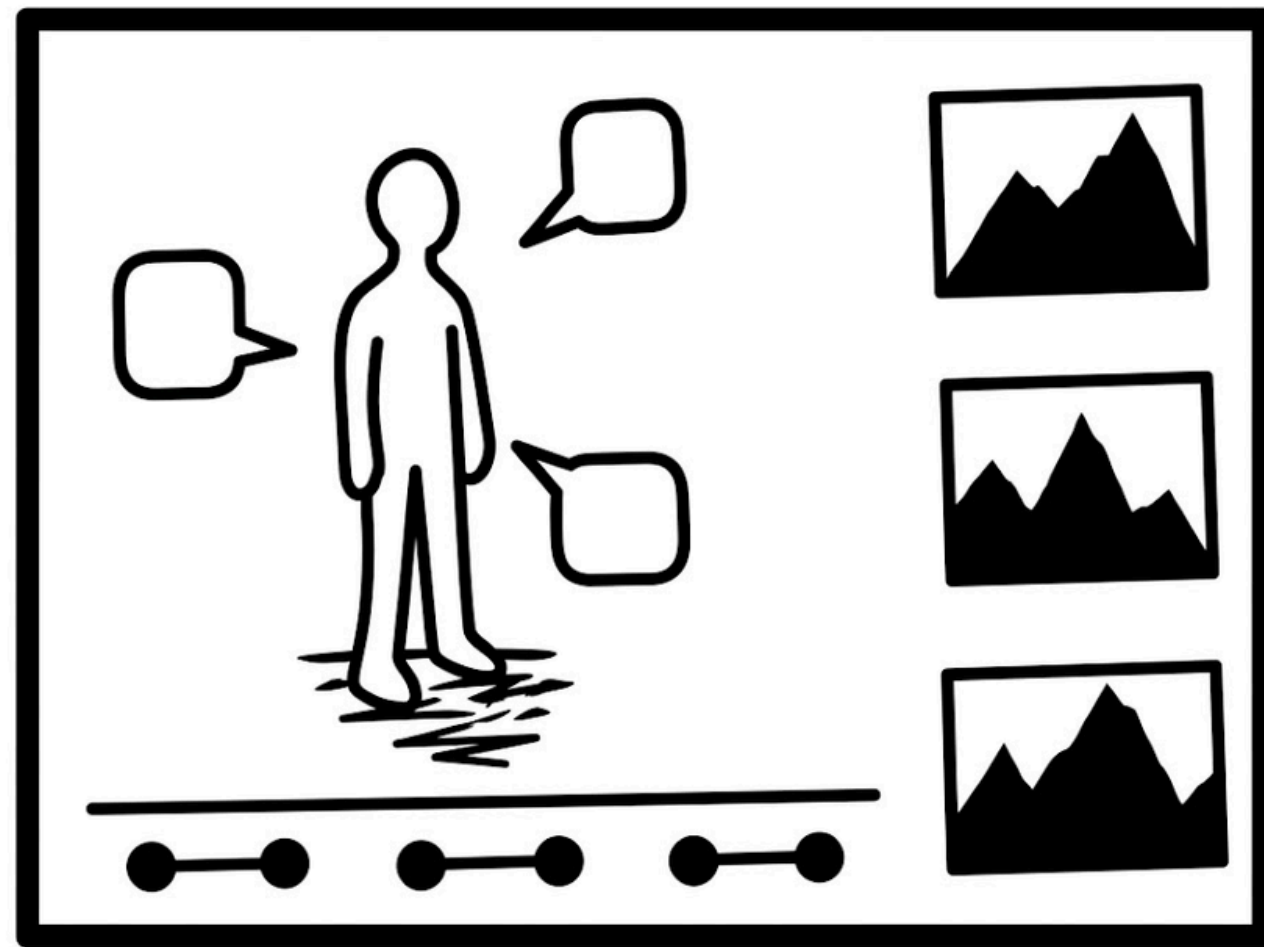

[Plotly Dash Gallery – Geology Ternary Map Explorer](#)

Main inspiration – Wells location on eastern Kentucky

Selecting the wells on the map through a lasso tool reveals the data point on the ternary plot, showing the mineralogy composition of the terrain where it is located.

Genre discussion

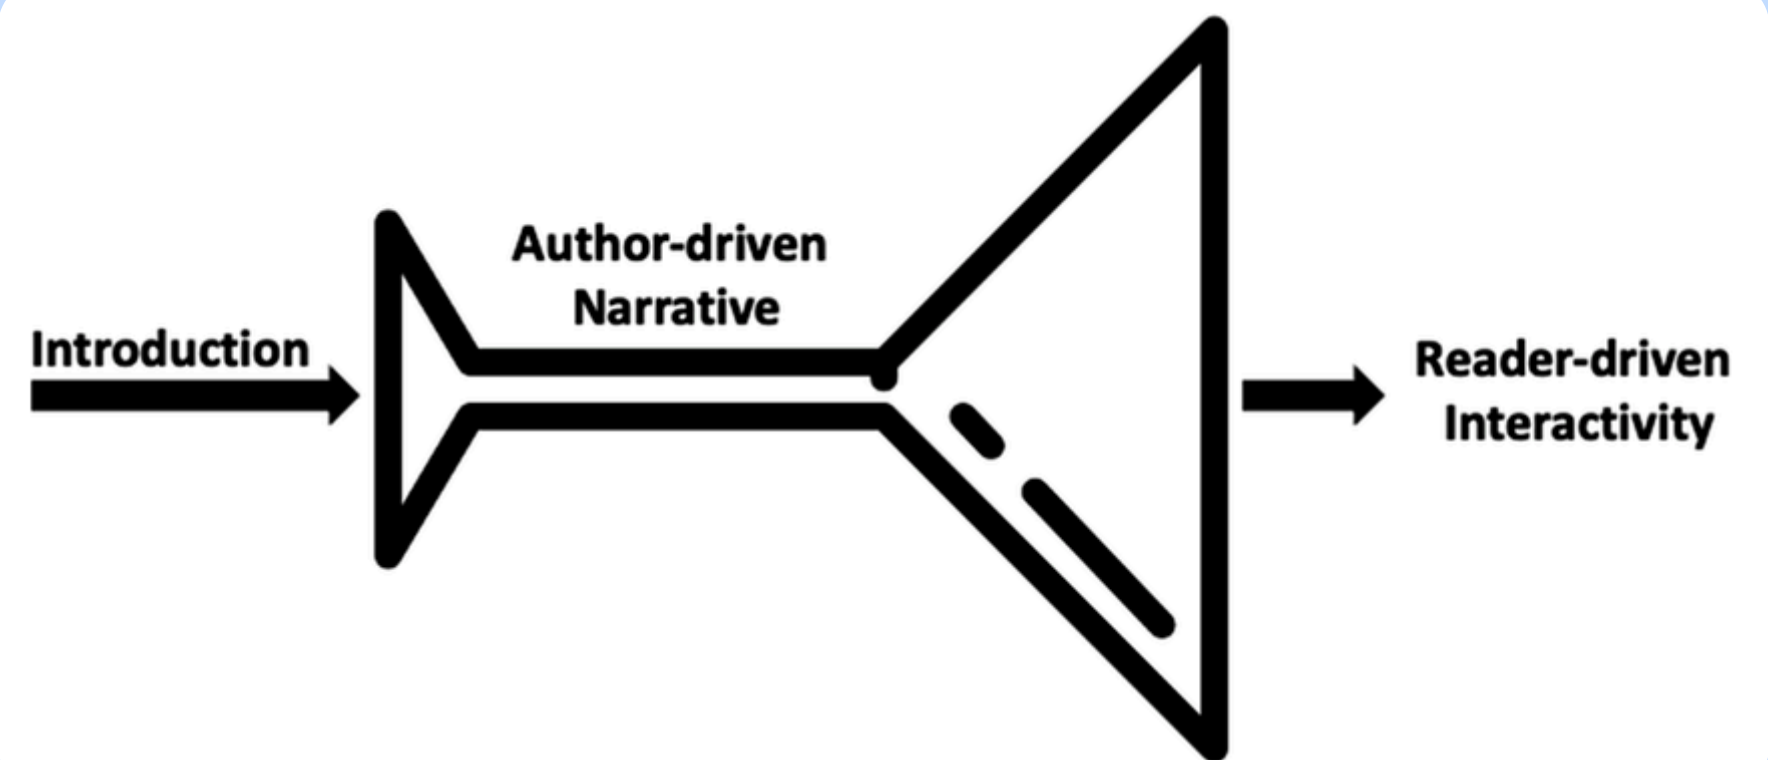

Partitioned Poster

What is the Genre of this Data Story?

We plan for the Data Story to be a *Partitioned Poster**, with a *Martini-Glass* structure. The Data Story will be driven by the visualizations, with the text focusing on them.

*according to the **Segel & Heer** paper

Dataset discussion

How do the datasets look?

The main dataset from Statistics Denmark contains data from 2008 to 2024.

Since the full dataset (HFUDD16) is made of approximately 106.4 Millions of rows, we will be using just a subset of it.

Another dataset for the highest-revenue companies will be incorporated.

The screenshot displays the Statistics Denmark website interface for the HFUDD16 dataset. The page title is "HFUDD16: Educational attainment (15-69 years) by region, highest education completed, socioeconomic status, industry, age and sex". The unit is specified as "Number". The interface includes a search bar and a "Select via maps" link. Below the title, there are tabs for "Select", "Advanced selection", and "Information". The "Select" tab is active, showing seven drop-down menus for selecting data dimensions:

- REGION (105)**: More options..., All Denmark, Region Hovedstaden, Copenhagen, Frederiksberg
- HIGHEST EDUCATION COMPLETED (11)**: More options..., H60 Bachelors programs, H70 Masters programs, H80 PhD programs, H90 Not stated
- SOCIOECONOMIC STATUS (4)**: More options..., Enrolled in education, Employed, Unemployed, Outside the labour force
- INDUSTRY (38)**: More options..., TOT ... Industry, total, A Agriculture, forestry and fishing, B Mining and quarrying, CA Manufacture of food products, beverages and tobacco
- AGE (12)**: More options..., Age, total, 15-19 years, 20-24 years, 25-29 years
- SEX (3)**: More options..., Total, Men, Women
- YEAR**: More options..., 2024, 2023, 2022, 2021
